

EHR AUDIT-TRAIL TO CHART RECONCILIATION

Labor and delivery encounter, CSN SYN-88001 (SYNTHETIC)

A consulting first pass for counsel and a testifying forensic expert. Subject to review and verification by retaining counsel.

SYNTHETIC SAMPLE. The patient, facility, users, chart and audit trail are invented. The 3,000-row export, the produced legend and the Bates-numbered chart are built the way a real production arrives, so the method and the citations can be checked end to end. Every citation below is a live link to a bundled page at the back of this file.

What counsel supplied, and what was done

Counsel supplied the audit trail export as a delimited file (3,000 rows) and as a printed report (67 pages, SYN-AT000001 to SYN-AT000067), the produced legend of user roles and action codes (SYN-LEG000001 to SYN-LEG000002), and the Bates-numbered encounter record (15 pages, SYN-LD000001 to SYN-LD000015). Each audit row was placed on one timeline with the chart entries. Where the audit row carries an Object ID that matches a chart Entry ID, the chart entry, its charted time and its Bates page sit on the same row. Roles and actions are read only from the produced legend. Codes the legend does not define are reported as "Not in produced legend" and are not interpreted.

Counsel's parameters

Parameter	Value used in this run
N: hours between charted time and a documentation event	2 hours
Date after which documentation events are listed	March 31, 2026 (supplied by counsel; the reason is counsel's)
Action category the flags apply to	Documentation, as the produced legend categorizes action codes
Matching key	Audit Object ID = chart Entry ID

Counts

Item	Count	Item	Count
Audit rows in the export	3,000	Flag A: documentation more than 2 h after charted time	7
Chart entries in the record	72	Flag B: documentation after 2026-03-31	1
Rows, legend category Access	2,765	Flag C: documentation event with no chart entry	2
Rows, legend category Documentation	70	Flag D: chart entry with no audit event	2
Rows, legend category Signature / Order / Output	31 / 5 / 12	Rows whose action code is not in the produced legend	117

Flagged items

Each row is an item that meets one of counsel's parameters. A flag is a pointer for the forensic expert, not a finding. Flag A counts documentation events, so a later modification of an entry charted on time also meets it.

Near the line, and not flagged: the attending note N-40134 (charted 2130, created 2305, 1.58 hours) and the delivery summary N-40142 (charted 2204, created 2340, 1.60 hours). A flowsheet edit at 1421 on the 1400 row was 0.35 hours after its charted time. The fetal monitor interface rows (action DEV_FILE, role SYS-INT) use codes the produced legend does not define; they are counted, not read.

What this is, and what it is not

This reconciliation places the produced audit trail beside the produced chart and counts what meets counsel's parameters. It does not conclude that any record was altered, falsified, backdated or spoliated, and it does not say why any entry was made when it was. A late entry or a later edit can have more than one explanation. Which one applies is a question for counsel and the retained forensic expert, who may need the facility's full audit tables, the note version history and the system's configuration to answer it. No testimony is offered.
